

Home Visits

	Who	Where	When
I. Preliminary Inspection			
RSI staff will perform a pre-qualification assessment of the property. This will consist of gathering important information pertaining to pre-existing architectural conditions/and potential pre-existing deficiencies that may or may not impact participation for the RSI benefits.	RSI Inspector	At your property (Approx. 30-45 minutes)	By appointment
II. Acoustical Testing			
An acoustical testing will be done of each habitable room using loudspeakers as part of the testing equipment. The individual homes that have interior noise levels equal to or greater than 45 decibels (dB) will qualify for the program.	Acoustical engineer	At your property (Approx. 3-4 hours depending on number of habitable rooms)	By appointment
III. Architect's Survey			
An architectural team will perform a survey of your home. This survey involves drawing a floor plan and measuring the windows, doors and other important features. We also record your choices for new doors and windows, such as color and styles.	Architectural team	At your property (Approx. 2+ hours depending on number of habitable rooms)	By appointment

	Who	Where	When
IV. Inspection for Hazardous Materials			
We will inspect your house for any lead paint and asbestos where work is to be performed so that our construction crews can take the necessary precautions in disposing of these hazardous materials.	Hazardous materials technician	At your property	Same time as architectural team visit
V. Reviewing the Plans			
At the design review meeting we will carefully go over all final paperwork, plans and specifications with you. You will have the opportunity to visit our showroom to see sample products and make your final selections.	Architectural team	Residential Sound Insulation Office (Approx. 45 minutes)	By appointment

All appointments will take place between the hours of 7:30 AM and 5:30 PM, Monday-Friday
Hall Closed every other Friday)
